

بسم الله الرحمن الرحيم

8th April, 2019.

Dear John F. Clauser,

While trying to understand quantum entanglement and sharing it with my children, I noticed during the shower that when the hot water was turned on in the distant bathroom, I felt the change in water temperature immediately.

The difference in quantum entanglement being the fine plumbing we are unable to perceive at present.

The example helps understanding the concept without anything appearing spooky.

With best wishes,

Ismat U. Nawabi MD.
